01

Office 365 SMB Migration Services

Packaged Migration Services for on-premises Exchange, Google Mail and IMAP mail services. We migrate mailboxes, public folders, distribution lists and perform the desktop changes. Our services are available per mailbox or on a per user/month contract, starting as low 10 mailboxes.

02

Office 365 Complex Migrations

Our Office 365 Migrations Team will work with you and your client to understand the required business outcomes. We will design an end-to-end migration to suit the requirements, setting up identity, Active Directory, migrating Exchange, Lotus Notes, POP, IMAP, GroupWise and most other mail platforms. Call us to discuss your client's needs.

03

Office 365 Backup as a Service

Office 365 BaaS is a complete backup service for your clients Office 365 environments. In the case of a catastrophic failure or accidental deletion, Office 365 BaaS is critical to getting a business online immediately. We manage backups end-to-end, covering Exchange Online, SharePoint Online and OneDrive for Business. The service includes restores and reporting. All of this at a low monthly fee and with no data limits.

04

Office 365 Administration as a Service

Our Administration as a service is designed to be standalone or to augment the admin services offered by Microsoft CSP's. Our service covers all things admin from setting up a tenancy, and user/group creation to license assignment and adding services.

05

Office 365 Reporting and Monitoring

Reporting and monitoring for Office 365 is critical to ensuring the environment is running efficiently and your clients are getting the best possible return on their investment. Our proactive service provides constant updates on performance, alerting you and your client of potential issues before they result in system outages or user downtime.

06

Office 365 Discover and Audit

With all the cyber threats today and the sensitivity of business data, it is critical to protect your environment against any sort of attack. Our Discover and Audit Service allows you to monitor all internal and external access and security activity to isolate events or threats quickly, unlike the native 365 audit log which provides all activity in one large, unwieldy view.
